

PARASAR MAKWANA

.NET Full Stack Developer | .NET Core · MVC · Angular · SQL Server · Entity Framework · REST API
+91 8160648748 | parasarmakwana18@gmail.com | linkedin.com/in/parasarmakwana | Ahmedabad, India

PROFESSIONAL SUMMARY

.NET Full Stack Developer with 3+ years of professional experience designing, developing, and maintaining scalable web applications using .NET Core, ASP.NET MVC, and Angular. Proficient across the full Software Development Life Cycle (SDLC) — from requirements and architecture through development, testing, deployment, and documentation. Strong hands-on experience with SQL Server, Entity Framework, REST API development, and Git-based version control. Detail-oriented problem solver with a consistent track record of writing clean, well-documented, and maintainable code in Agile team environments. Equally comfortable on the backend and contributing to responsive front-end components with Angular and JavaScript.

TECHNICAL SKILLS

.NET Stack: ASP.NET Core, .NET MVC, .NET Web API, C#, Entity Framework Core, ADO.NET

Front-End: Angular, jQuery, HTML5, CSS3, Bootstrap — responsive UI development

Databases: SQL Server, MySQL — database design, stored procedures, query optimisation, schema management

Data Access: Entity Framework Core, ADO.NET, LINQ, Repository Pattern

REST APIs: REST API Design & Development, API integration, JSON, Web Services

Testing & QA: Unit Testing, Validation & Testing across SDLC, Debugging, Performance Troubleshooting

Version Control: Git, GitHub, TFS — branching, pull requests, code reviews, version management

Documentation: Technical documentation, development process documentation, code commenting standards

Cloud & DevOps: Azure DevOps, CI/CD Pipelines, Azure App Service, Azure SQL Database

Methodology: Agile / Scrum, Sprint Planning, Cross-functional team collaboration (QA, PM, Dev)

Security: Authentication design, multi-layer security, secure coding practices, latest security standards

PROFESSIONAL EXPERIENCE

.NET Full Stack Developer | *Techronus Business Solutions – Microsoft Partner* | *NASSCOM Member*
Jul 2023 – Present

Centralized Pricing System | **.NET Core MVC + SQL Server Web Application**

- Designed, developed, and maintained a high-quality enterprise web application from scratch using .NET Core MVC (C#) and SQL Server, following full SDLC from requirement gathering to production deployment.
- Built responsive front-end components using HTML5, CSS3, Bootstrap, and JavaScript — ensuring consistent UI across modules and devices.
- Implemented data access using Entity Framework Core with Repository Pattern, writing clean and efficient database queries optimised for performance.
- Developed and maintained SQL Server database structures including stored procedures, indexes, and schema migrations to support evolving business requirements.
- Designed and implemented multi-layer authentication and OTP-based login following secure coding practices and latest security standards.
- Wrote well-documented, clean code throughout — maintaining technical documentation and inline code comments to support long-term maintainability.
- Deployed and managed the application via Azure DevOps CI/CD pipelines — handling build, validation, testing, and release stages end-to-end.
- Identified, prioritized, and resolved performance bottlenecks using parallel processing — improving API throughput without changing the external interface.
- Collaborated closely with product managers and cross-functional team members throughout the SDLC to translate requirements into robust technical solutions.

US-Based Graffiti Platform | .NET Core MVC + Angular + MySQL

- Developed and maintained a scalable web application using .NET Core MVC, MySQL, and JavaScript for a US-based client — managing the full development lifecycle from design to deployment.
- Built Angular-driven front-end components for interactive map features (Google Maps API integration with polygon drawing tools) — combining clean Angular architecture with REST API consumption.
- Applied jQuery and JavaScript for dynamic UI behaviour and real-time user interaction on the front-end.
- Implemented Repository Pattern across data access layers to ensure clean separation between SQL Server queries and business logic.
- Performed validation and testing across all modules before deployment, ensuring optimal performance and zero post-release critical issues.
- Used Git for version control throughout — managing branches, pull requests, and code reviews with a cross-functional, internationally distributed team.
- Worked within Agile sprints, collaborating with QA engineers and product managers to prioritize and execute tasks efficiently within each cycle.

Vendor Portal | ASP.NET MVC + REST API Integration

- Designed and developed a vendor management web application using ASP.NET MVC (C#), HTML/CSS, JavaScript, and jQuery — maintaining consistency across all front-end modules.
- Consumed and integrated external REST API web services from a business-central backend team, implementing robust error handling and contract compliance checks.
- Maintained and improved existing application code — debugging, troubleshooting, and refactoring modules to improve stability and performance.
- Produced and maintained technical documentation for all developed modules and API integration processes.
- Ensured application security was updated throughout, applying latest best practices for data handling and access control.

Point of Sale (POS) System | .NET (WPF) + Entity Framework + SQL Server

- Developed a full-featured desktop application using WPF (C#), Entity Framework, and SQL Server — responsible for transaction processing, real-time analytics, and inventory management.
- Designed and maintained SQL Server database structures and queries, optimising for fast transaction performance under concurrent load.
- Identified and resolved critical threading and execution flow issues — improving application stability and ensuring consistent performance in a live retail environment.
- Implemented unit tests for core business logic, achieving zero critical post-deployment failures across the production lifecycle.
- Reviewed, debugged, and troubleshooted application issues post-deployment, maintaining optimal performance and resolving live bugs with minimal downtime.

Software Engineering Intern – .NET Developer | Techcrons Business Solutions Jan 2023 – Jun 2023

Candidate Management System | ASP.NET Core + ADO.NET + SQL Server

- Built a full-stack recruitment platform using ASP.NET Core (C#), ADO.NET, and SQL Server — covering admin, HR, and candidate-facing modules within a single cohesive application.
- Designed relational database schema and wrote efficient SQL Server queries and stored procedures for all data operations.
- Implemented REST API endpoints and role-based access control — ensuring secure, scalable data access across user types.
- Maintained clean, well-documented code with Git version control from the start of the project, following consistent branching and commit conventions.

KEY ACHIEVEMENTS

- Delivered 5+ end-to-end .NET web applications across the full SDLC — from requirements through development, testing, documentation, and production deployment.
- Achieved zero critical post-deployment failures on a live production POS system through disciplined unit testing, validation, and post-release ownership.
- Self-identified and resolved a performance bottleneck on a high-throughput .NET platform using parallel processing — measurably improving response times.
- Promoted to client-facing technical lead within 12 months — trusted to manage delivery timelines, review code, and liaise with international stakeholders independently.

- Consistently maintained technical documentation and clean code standards across all projects — reducing onboarding friction for new team members.

EDUCATION

Bachelor of Technology – Computer Engineering

2019 – 2023

Ganpat University, Gujarat, India

ADDITIONAL INFORMATION

Languages: English (Professional Proficiency) | Gujarati | Hindi

Angular: Hands-on experience with Angular / AngularJS component architecture, data binding, and REST API integration

jQuery: Proficient in jQuery for DOM manipulation, event handling, and AJAX-based interactions

Security: Experienced in implementing secure authentication, access control, and secure coding practices

Availability: Immediately available | Open to full-time on-site, hybrid, or remote roles
